MLI International Schools

English language course March 2017
Berlitz Malta

LANGUAGES

Italian Native	**English** B1

HOBBIES

Photography

Hiking

Traveling

Motorbikes

WORK EXPERIENCE

Videoarts Webdesign of Fabio Mosti (June 2015 - July 2015)
IT Intern

I worked for a month as an intern at Fabio Mosti's Videoarts Webdesign, a small company that opened me up to the world of work.
Fabio allowed me to experiment on the practical side with object-oriented programming, helping me to program a management software for a kennel based on Java.

Cartsan S.r.l (April 2018 - March 2019)
IT Customer Support

My main job was to support customers in using and troubleshooting medical software. Also, given my passion for development, my boss gave me the opportunity to develop internal management for the company. I then learned to program with php, using MySQL as a database and refining my knowledge of HTML and CSS.

YOOX NET-A-PORTER GROUP (May 2019 - Present)
Junior Interface Developer

In YNAP I started my journey with the role of frontend developer. During these almost 3 years I had the opportunity to contribute to the development and maintenance of large e-commerce in the world of luxury, such as Bottegaventa, Brioni, Yves Saint Laurent, Alaia and Dunhill. This allowed me not only to significantly increase my technical skills in the web fields, but also allowed me to discover the potential of working in a team thanks to agile workflows.

EDUCATION

IIS O. Belluzzi Fioravanti (September 2012 - June 2017)
Upper secondary education diploma Informatics and telecomunications EQF Level 4

OverNet Education (March 2019 - May 2019)
Junior Interface Developer

I participate in a full time two month course for web developers offered by Modis with the possibility of hiring in YNAP group as frontend developer. The course gave me a more marked educational imprint regarding web development in general: the design with Adobe Photoshop and Illustrator, the frontend development with HTML, CSS and Javascript ES6, also entering into the aspects of responsive layouts, to finish with the backend development with C# and the .NET framework.

OverNet Education (March 2020 - April 2020)
C# development

Although I don't often use C# at work, I was curious to learn more about some aspects of backend programming, so I took the opportunity to participate in a C# course offered by Modis, that allow me to learn more about: Unit test, mock test Ado, LinQ (entity framework), edmx, lambda expression, CRUD Main programming patterns: creational, structural and behavioral.

PROJECTS

Tubeframes Ondemand
http://tubeframes.altervista.org

I developed this project as diploma thesis for high school. The website consists of a subscription-based streaming site like Netflix, but with the difference that the films are imported and categorized by genre from Youtube, with control panel to manage users, films and subscriptions. I used PHP, HTML, CSS and little bit of Javascript to develop it.

ITambiente S.r.l Website
http://itambiente.com/

Development of the company website. It allowed me to approach the development of showcase sites and communication with the customer. I improved me with HTML, CSS using Bootstrap 3 framework.

Orionh Plus UX
https://orionxpro.com/

I created and developed for Milkywayhunters the graphics of one of their most popular plugins for Adobe Photoshop, which helps photographers in the post production of night photographs. Adobe Illustrator to sketch the graphics and HTML with CSS to develop it.

Cassamutuamipaaf Website
http://www.cassamutuamipaaf.it

Website development based on PHP and MySQL database.

Intranet CRM

Development of an internal company web management software in PHP completely customized for the Cartsan S.r.l company.

Astropanel v3, 5 UX
https://astropanel.it/

Restyling of versions 3, and 5 of the Astropanel plugin for Photoshop.

Modisfill Chrome Extension
http://bit.ly/modisfill

Modifill is the Chrome extension that I developed for all Modis and Adecco employees who want to simplify and automate the compilation of their WTC. I developed it to experiment in a practical way the Chrome Extension APIs and the Javascript programming ES6.

EAGLEDROID Website
https://www.eagledroid.com

Development of the project website.

yDevice Switcher Chrome Extension
http://bit.ly/ydevice-switcher

I created this simple Chrome extension for my team members in YNAP using Javascript

Ecommerce experiment

I started developing an e-commerce collaboration with my collegue using the JAM Stack architecture and AWS services: Amplify, DynamoDB, IAM, Cognito, and React with Gatsby as static site generator for the front end.

Digitalieuguali
https://digitalieuguali.it/

digitalieuguali.it is the project I created for YOOX. It was a great pleasure to have developed a site that has had an important following in our country, both professionally and humanly.
